What is being tested?
Expected behavior?

Schematic?

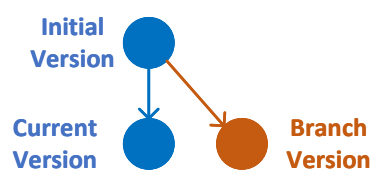

/** In this test, we are adding new elements to the EMF model during its evolution. The change operation is performed on the main branch, while a similar change is made by creating a new branch. Here is the scenario:

1. Main Branch: A new family member named Melania is added to the Trump family.
2. New Branch: A new family member named Ivana is added to the Trump family.

Expected: This results in two separate development lines for the model, each with its own modifications to the Trump family:

- The main branch now includes element fm2 as a new family member of the Trump family.
- The new branch has element fm3 as the newly added family member of the Trump family.
